

I feel that the government should stay away from subscription type services such as XM Radio. I drive 70 miles each way to work everyday and the traffic and weather information is very valuable to me. Without this service, my daily drive would be more difficult and take a great deal of time. Please understand that regulation of non-subscriber services is understandable, but I pay for this service, so I don't want the government telling what I can and cannot hear. Please vote NO on HR4026. Thank you.
